Survey under order dated

Sept. 10, 1981

O. T. Smith

FEET

This survey was made with a Zeiss optical scale Theodolite Model Th 2, No. 64534 having a horizontal circle 3.94 ins. diam. and vertical circle 3.34 ins. diam. The circles are graduated in degree and minute increments. An optical micrometer, adjusted to the vertical and horizontal circles permits the reading of angles direct to 1 second accuracy and estimating to 0.10 second accuracy. The instrument was in good condition at the time of the survey, and all adjustments were in good order.

All azimuths in this record were determined by the method of horizontal-angles-right and referred to the meridian determined by the following observation:

Jan. 26, 1982 at Cor. No. 1 of the Peak 34 mill-site in latitude 33°28'34.1" N., and longitude 111°02'29.2" W., elevation 3,350 ft. above sea level, and temperature 78° F., make a series of six altitude observations on the sun for azimuth at approximately equal time intervals, three each with the telescope in direct and reversed positions, observing opposite limbs of the sun, and reading the horizontal angle from a reference point about 330 ft. southwestward to the sun.

Mean time of observation,

105th meridian standard

time = 2:33:30 p.m.

Declination of sun at mean

time of observation = 18°36'59.9" S.

Mean observed vertical

angle to sun's center = 30°48'30"

Mean horizontal angle from

reference point clock
wise to sun's center = 347°47'30"

True bearing to reference

point = S. 45°07'41" W.

The tie lines and corner distances were measured with a Topcon Electronic Distance Meter, Model DM-C2, No. 001534, all other distances were measured with a Lufkin steel tape 500 ft. in length, graduated every foot for 500 ft., with the first and last foot graduated in 1 tenths, and hundredths and a steel tape 12 ft. in length graduated in feet, tenths, and hundredths; both tapes were compared with a Lufkin Ranger standardized tape at the time of beginning the survey, and found correct.

All lines and connections of the survey were run by direct method.

The magnetic declination observed at each corner of the survey gave a uniform value of 12°45' E.

Mineral Survey No. 4839

PEAK 34 MILLSITE

## UNITED STATES DEPARTMENT OF THE INTERIOR BUREAU OF LAND MANAGEMENT

## CERTIFICATE OF SURVEYOR

Name of Mineral Surveyor	Date
O. T. Smith	Feb. 18, 1983
HEREBY CERTIFY That in pursuance of an orde Bureau of Land Management lated September 10, , 19 of Pinto Valley Copper Corporation known as the (lode, placer, or mill site) Peak 34 situated in Sec. 33 Range 13 E., G. & S. R. M. Me This survey, designated as number 4839, been made in strict conformity with said order, the he United States, and in specific manner described FURTHER CERTIFY That the labor expended a lode or placer) embraced in the said mining claim by claimant(s) or grantors are fully stated in my report. The character	received from the Department of the Interior, at Phoenix, Arizona  81 , I have carefully executed the survey of the claim millsite  unsur. , Township 2 N.  eridian, in the State of Arizona  has been executed by me and under my direction and has Manual of Instructions for the Survey of Public Lands of the foregoing field notes.  and improvements made upon and for the benefit of the location(s)
ull detail. No portion of, or interest in, said labor luded in the estimate of expenditures upon any oth
